EXPERIENCE

RelayCars | Los Angeles, CA 2018 - Present
SOFTWARE ENGINEER

- Architected, built, and maintained a restful JSON API service for delivering thousands of vehicle assets to multiple large scale customers.
- Created a VR Webplayer that utilizes vehicle panoramas and 360° spins. Used by clients like Walmart's CarSaver and CDK -- the largest provider of car dealership websites in North America.
- Took on the role of DevOps and deployed our APIs using AWS services like Elastic Beanstalk, Cloudfront, S3, and EC2 instances.

Citta Corp LLC | New York, NY 2016 - 2017
SOFTWARE ENGINEER

- Worked on a suite of microservices and applications built primarily on open source technology using Javascript, HTML, LESS and Angular.
- Created and deployed our corporate website from scratch using Wordpress
- Held sole responsibility for designing and delivering our in-house Inbox service built on the Nylas api
- Maintained code using VMWare, Gitlab, and Version One for an efficient Workflow

General Assembly | New York, NY 2015 - 2016
WEB DEVELOPMENT IMMERSIVE

- Studied full-stack web development as part of a rigorous (60+ hrs/week) course
- Solved daily code challenges and built several full stack applications from design to deployment applying best practices and agile methodologies

PROJECTS

Barkr | Angular · Google Maps API · MongoDB · Express

- Set up playdates for your dog or look for one in your neighborhood

Text4books | Javascript · Agile · MongoDB · Bcrypt · Git · AJAX

- Collaboratively developed a full CRUD app that provides a campus-centric marketplace for college students to exchange textbooks
